ATRON

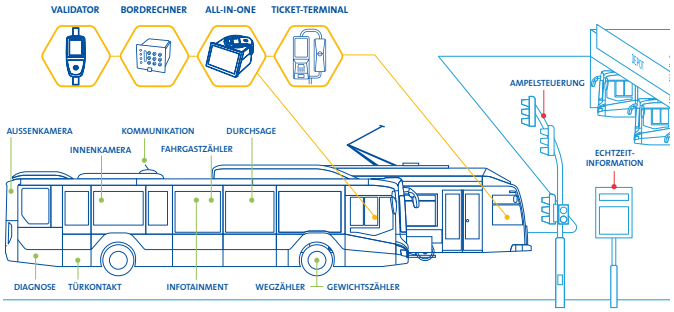

ATCS - THE OPERATIONS CONTROL SYSTEM

Even in local public transport, more and more services have to be provided with increasingly scarce resources. Here, the ATRON operations control system ATCS (ATRON Transport Control System) relieves transport companies of their daily tasks. Thanks to its infinite scalability, the size of the transport company is irrelevant. Adaptations to the constantly changing challenges are also possible during ongoing operations.

ATCS - a reliable partner

The possible applications of ATCS range from the unmanned automated control center to the urban variant with extensive dispatching measures. Newly developed features allow smooth handling of large amounts of data and offer comprehensive real-time monitoring. Once measures have been taken, they are displayed in ATCS in a clear and user-friendly manner.

ATCS - simplifies operations in urban and regional transport

The ATRON ATCS is the perfect solution, especially for transport companies in regional transport or in smaller/medium-sized cities - but it is also very efficient in metropolitan areas. Thanks to many years of experience and the use of predefined standard modules, the introduction of an ATRON operations control system with all functionalities is possible within a very short time. Of course, the ATCS can also be optimally combined with other ATRON subsystems such as ticketing or fleet and operations management.

ATCS at a glance

Various types of radiotelephony, e.g. announcements or emergency calls

- Instructions from the control center to the vehicles
- Messages from the vehicles to the control center
- Data exchange via various radio procedures

Signaling of threshold values (e.g. timetable deviations)

- Connection protection and monitoring
- Display of the occupancy rate of the vehicles
- Recording of all relevant data for reports / statistics Registration and deregistration of vehicles

For companies and networks with 50 to 5,000 vehicles

- Inexpensive, modular, scalable
- Vehicle monitoring and dispatching
- Supra-regional passenger information
- Can be combined with other control and depot management systems
